This is a Jupyter Notebook that contains Julia code I will run in the first lecture of Spectral Graph Theory. I find experiments to be incredibly useful when working on spectral graph theory. They help me figure out what is true, and they help me find counterexamples to my conjectures.

If you want to try using this, you will need to install Jupyter (via Python), Julia and IJulia. You also need my package, called `Laplacians.jl`. It may be added in Julia via

```
Using Pkg
Pkg.add("Laplacians")
```

In [1]:
```
using Laplacians, LinearAlgebra, Plots, SparseArrays, FileIO, JLD2, Random
default(fmt=:png)
Random.seed!(0)
```

Out[1]:
```
TaskLocalRNG()
```

In [ ]:
```
?plot_graph
```

In [2]:
```
function myshow(x)
    show(stdout, "text/plain", x)
    println()
end
```

Out[2]:
```
myshow (generic function with 1 method)
```

Path Graphs

In [3]:
```
M = path_graph(4)
```

Out[3]:
```
4×4 SparseMatrixCSC{Float64, Int64} with 6 stored entries:
  ·   1.0   ·    ·
 1.0   ·   1.0   ·
  ·   1.0   ·   1.0
  ·    ·   1.0   ·
```

In [4]:
```
Matrix(M)
```

Out[4]:
```
4×4 Matrix{Float64}:
 0.0  1.0  0.0  0.0
 1.0  0.0  1.0  0.0
 0.0  1.0  0.0  1.0
 0.0  0.0  1.0  0.0
```

In [5]:
```
Matrix(lap(M))
```

Out[5]:
